

A spatial resource

B maximum label-transfer score

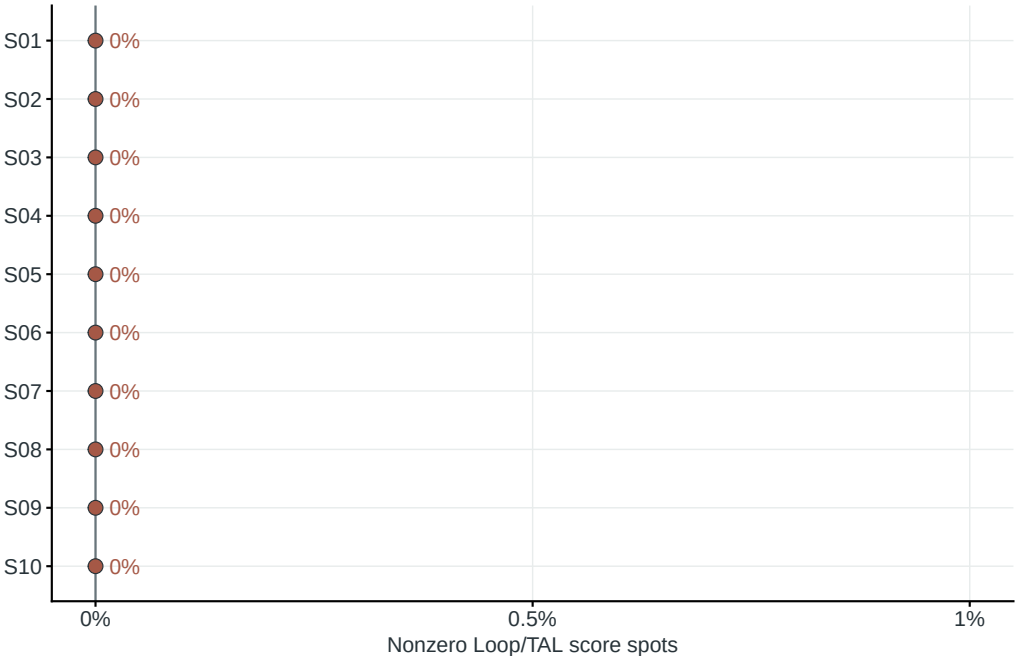

C max-predicted broad-compartment composition

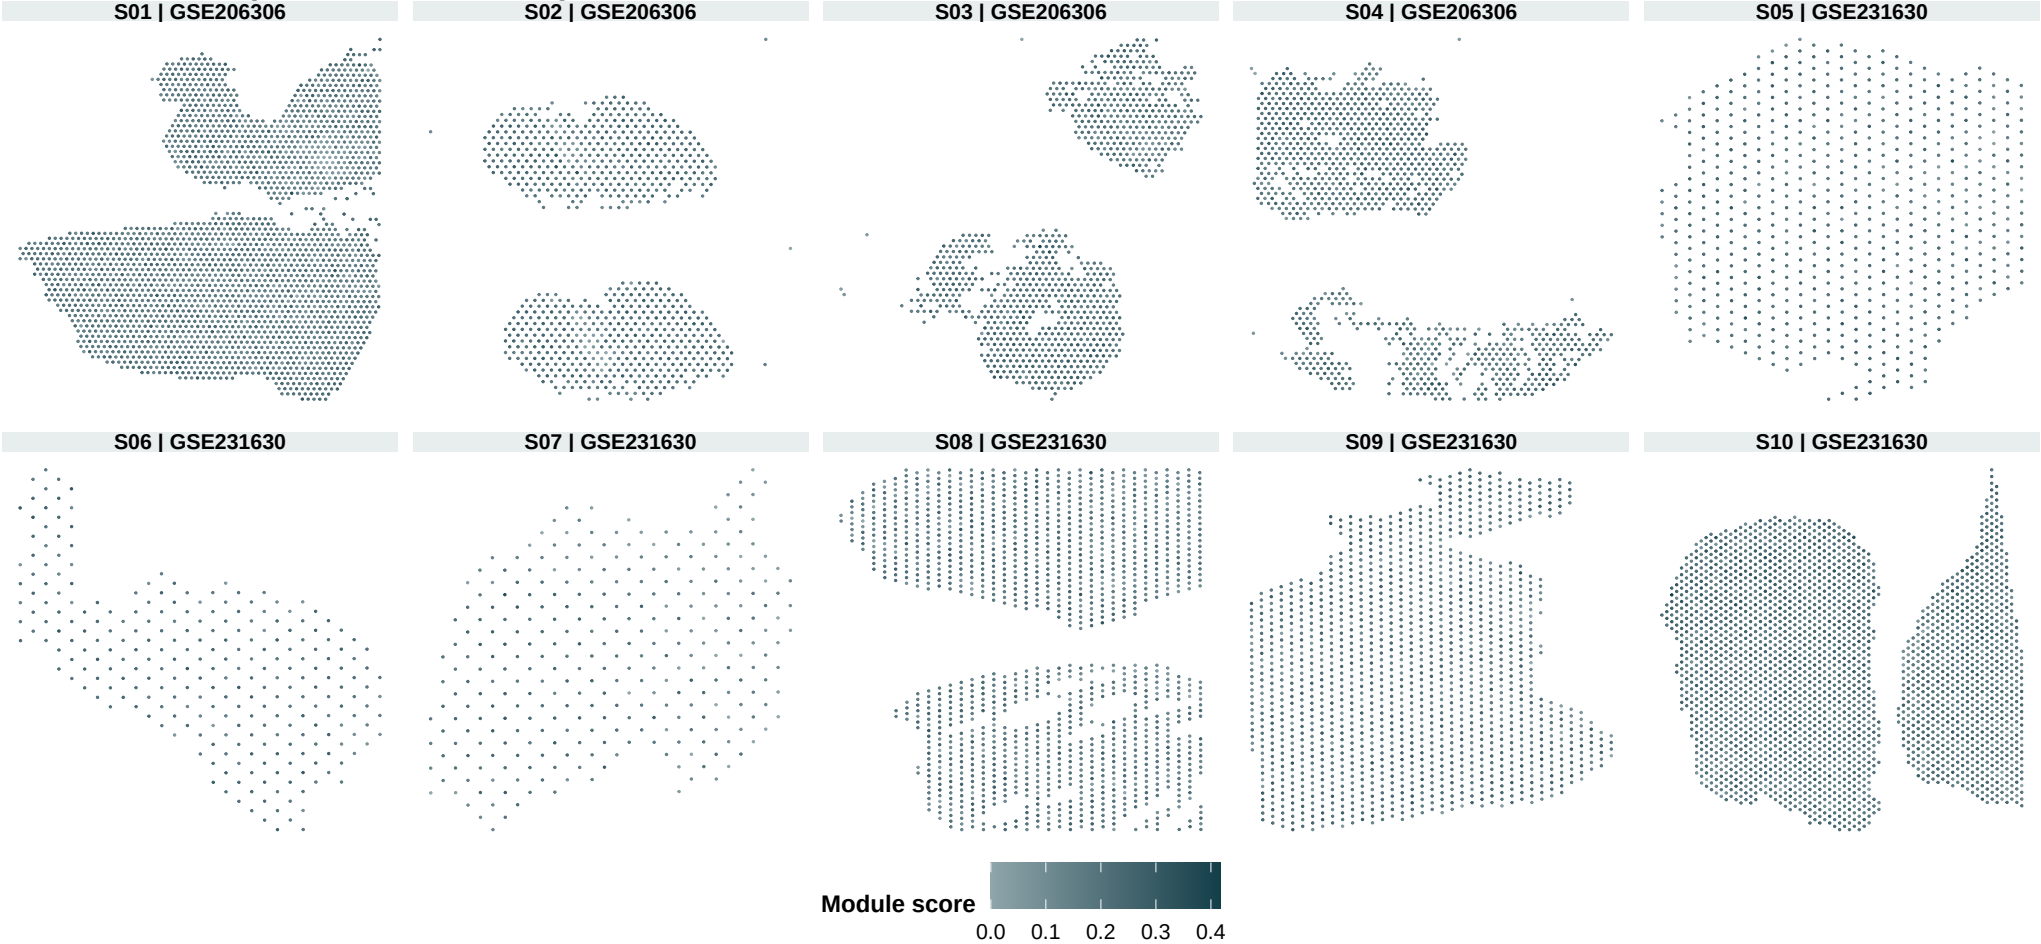

D Loop/TAL projection usability

Nonzero prediction-score fraction was 0% in every section

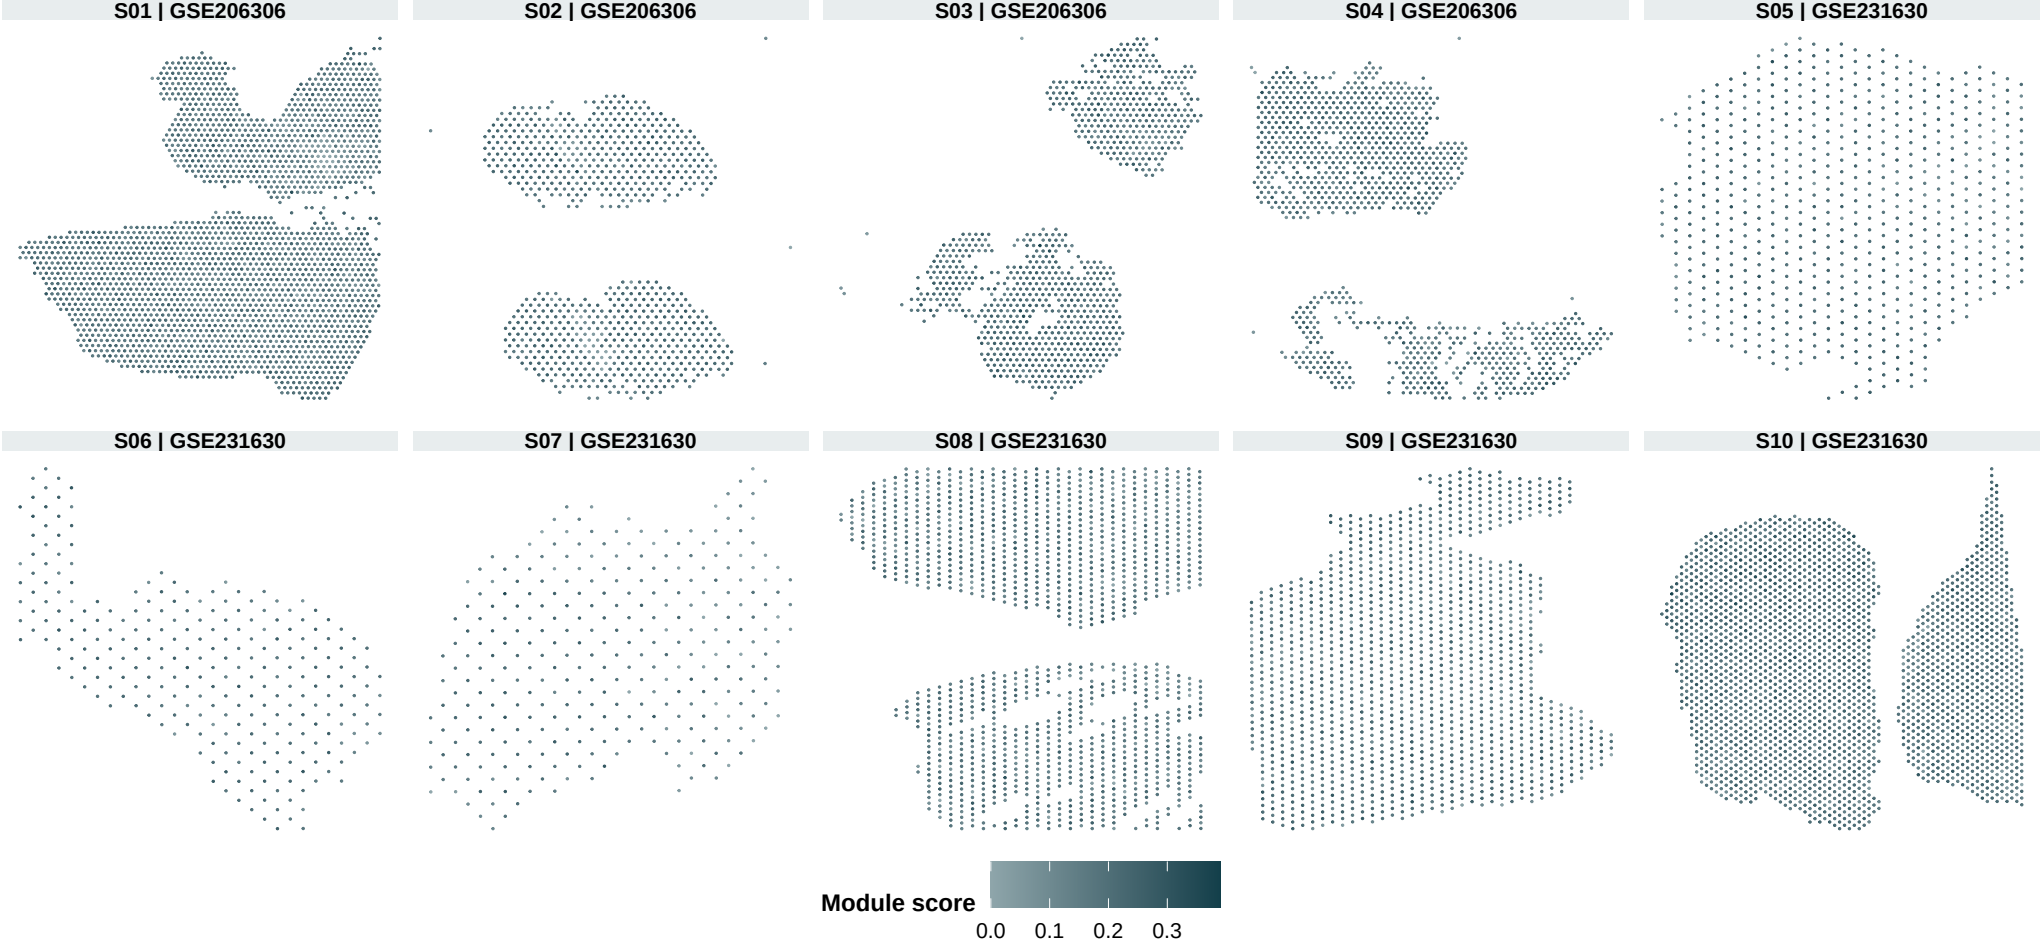

Ten complete sections: four GSE206306 and six GSE231630. Broad-compartment context only; no lesion ROI was available.

B1 Bonferroni spatial module overlay

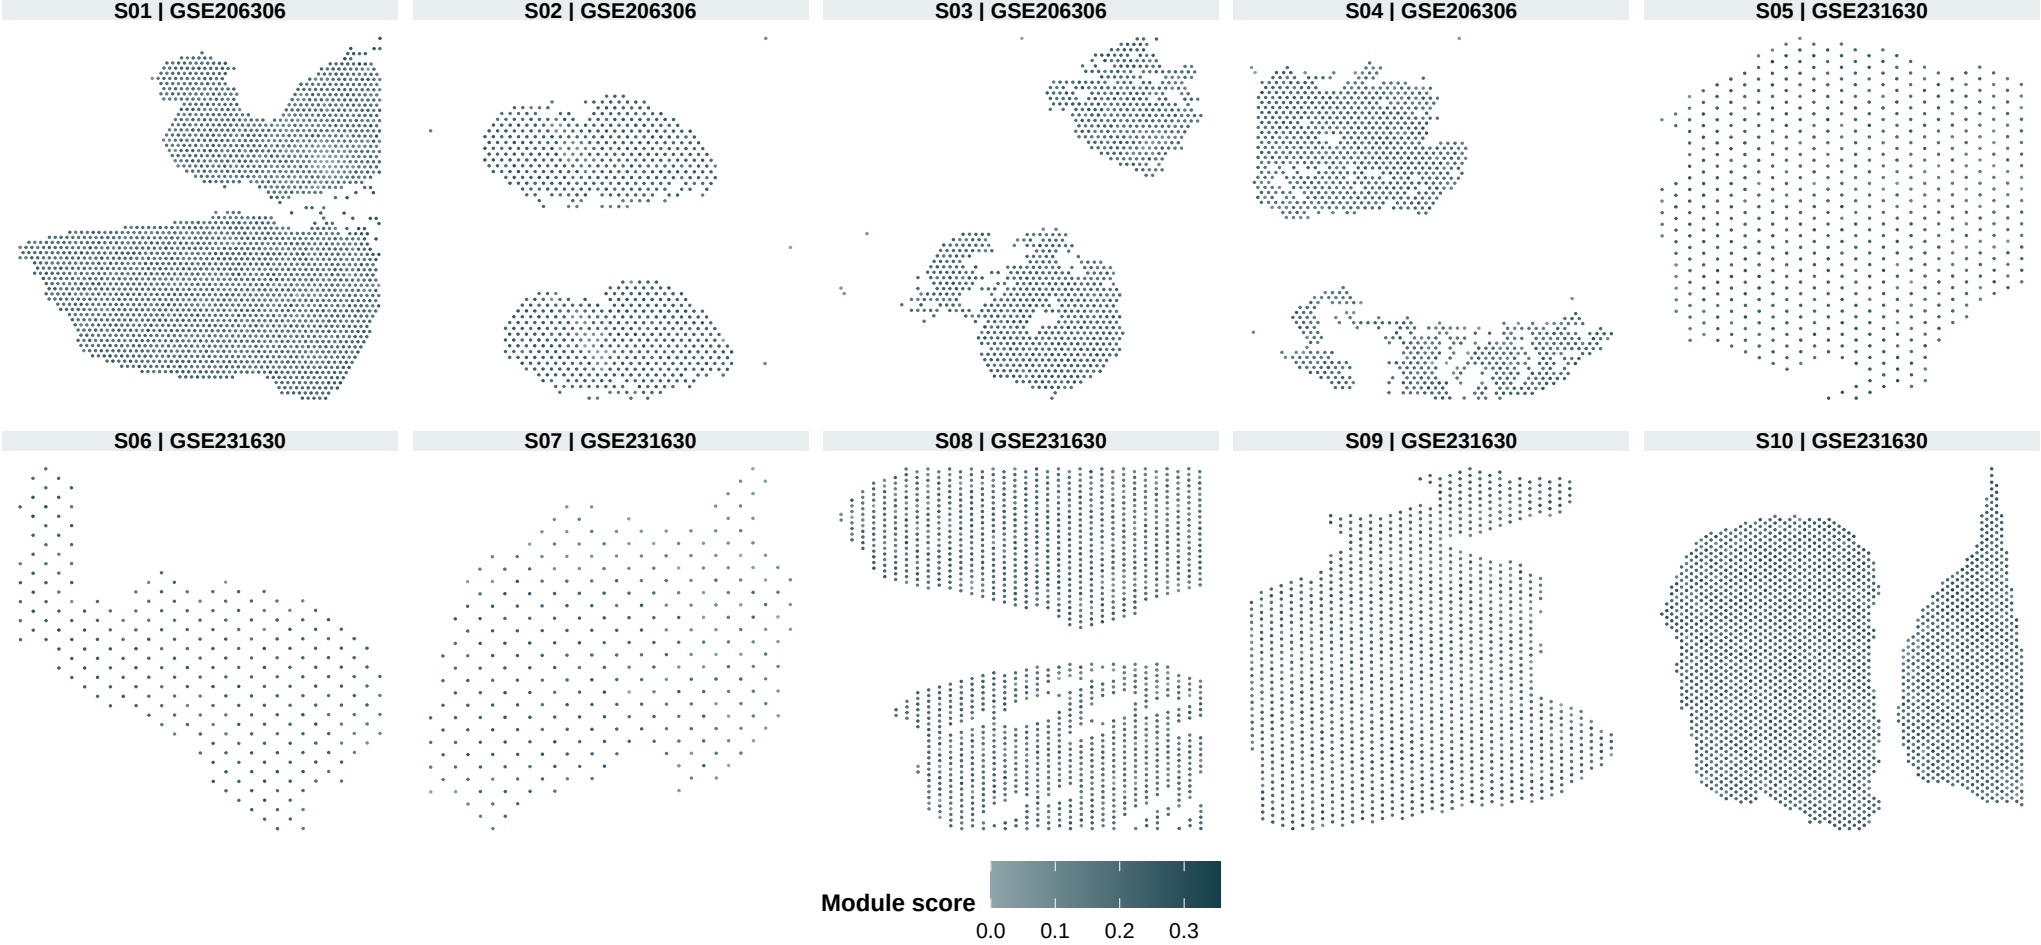

Ten sections: four GSE206306 and six GSE231630. Descriptive projection only; no plaque localization, disease-control test or Loop/TAL enrichment.

B2 Top 100 spatial module overlay

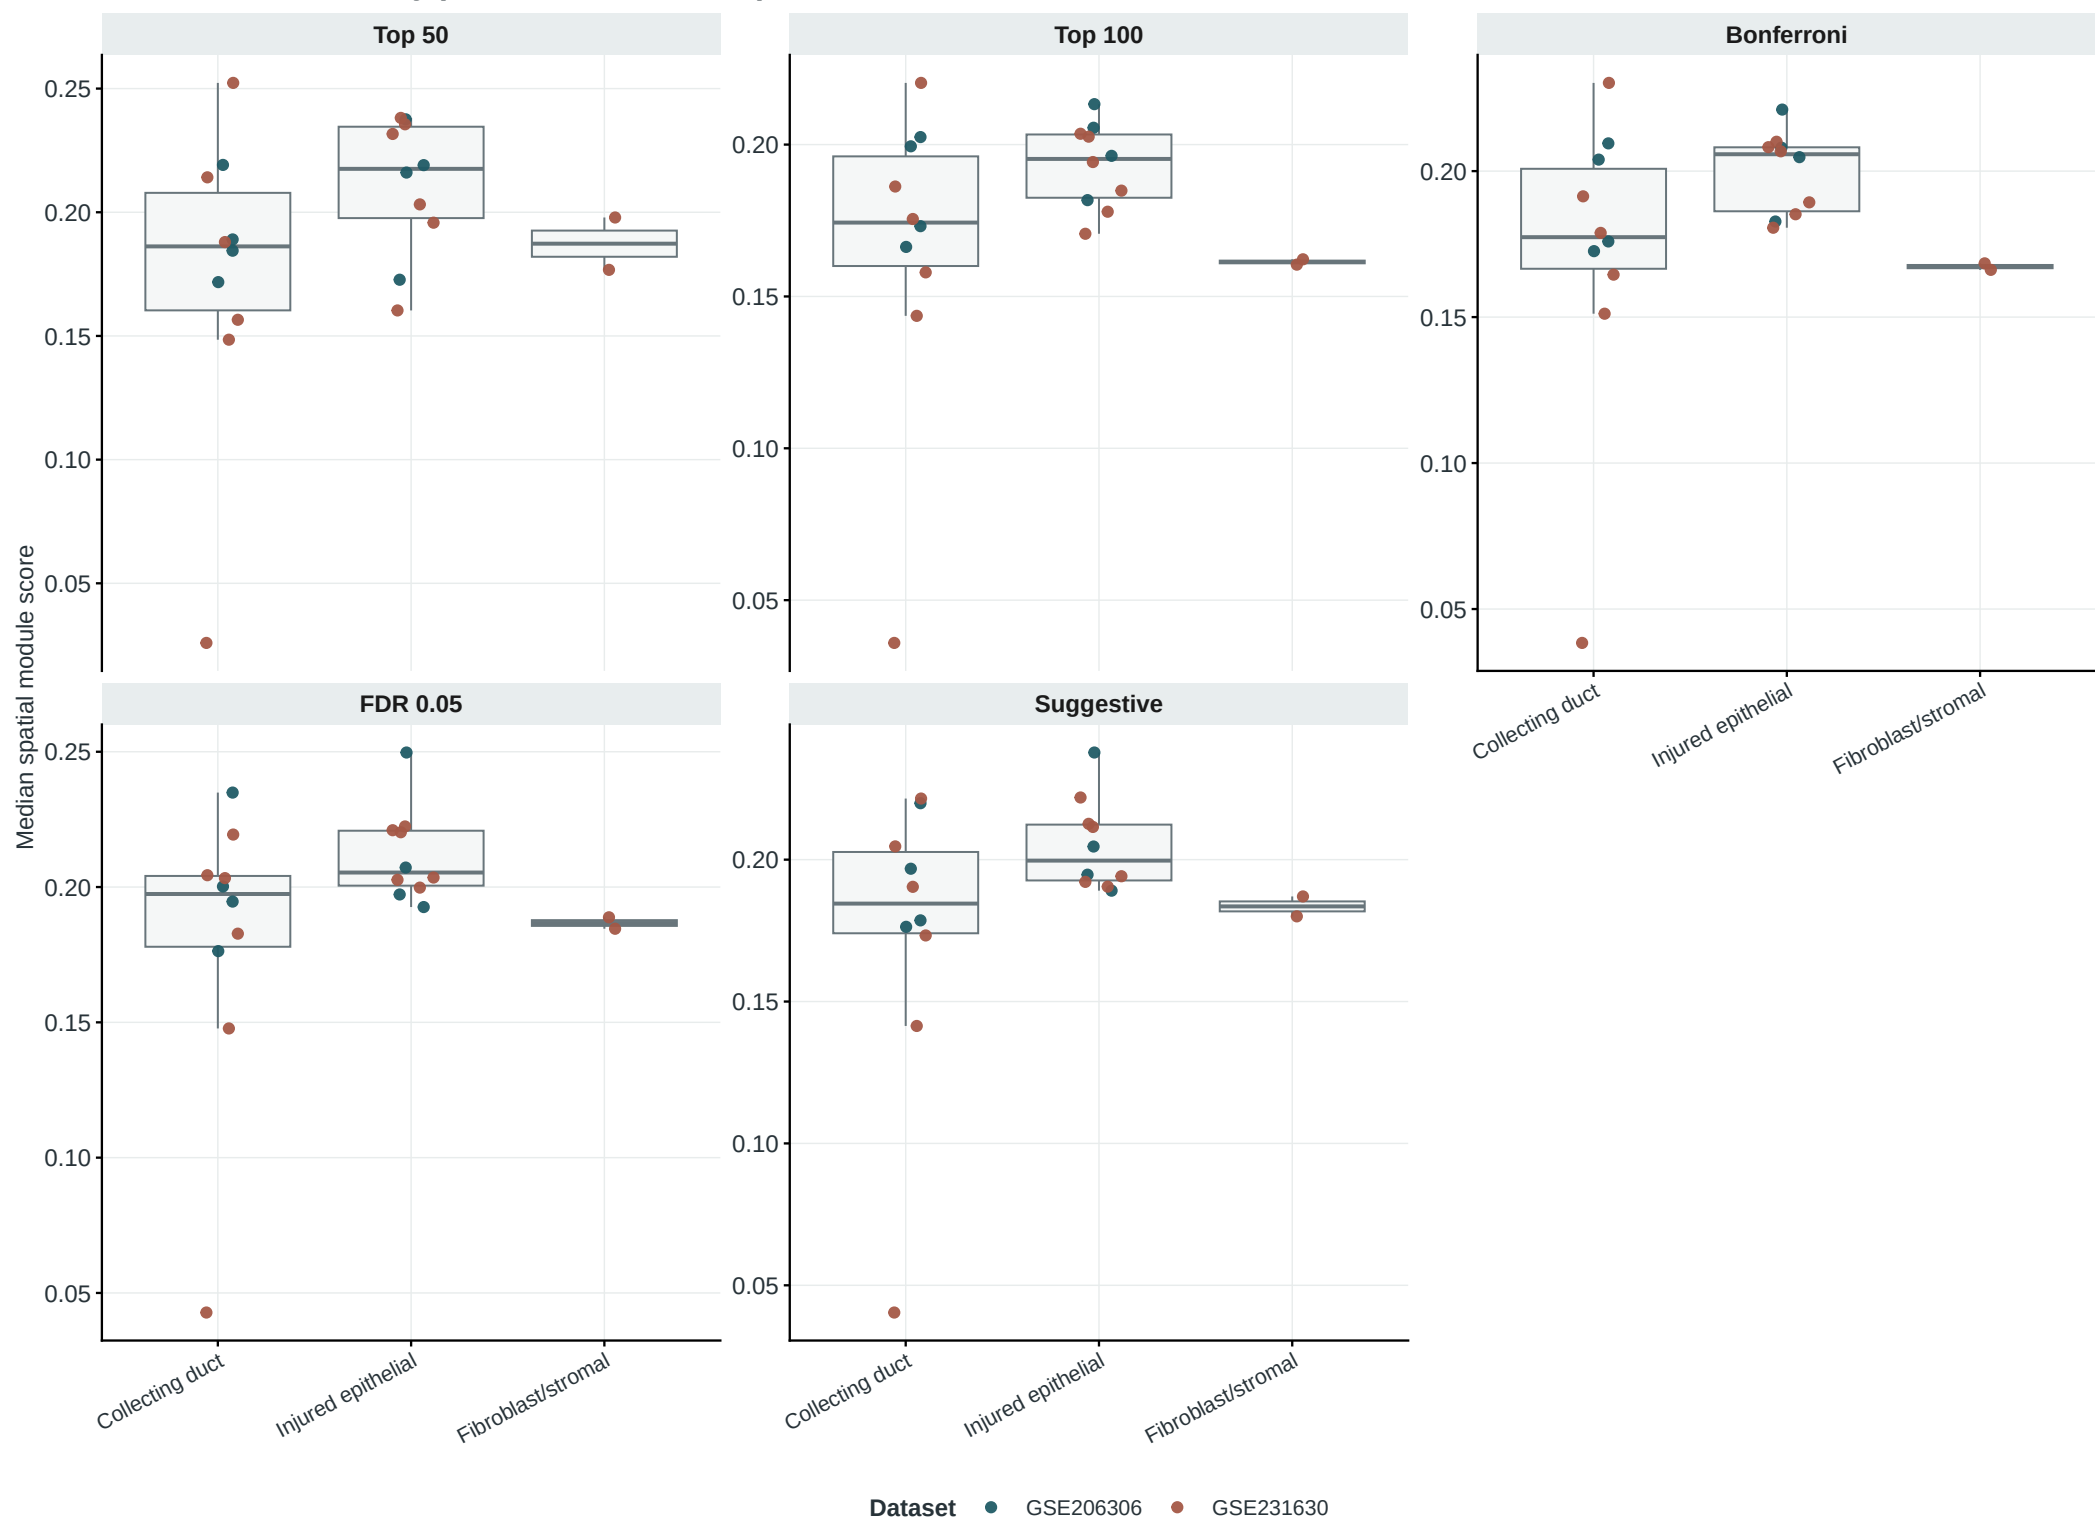

Ten sections: four GSE206306 and six GSE231630. Descriptive projection only; no plaque localization, disease-control test or Loop/TAL enrichment.

B3 Suggestive spatial module overlay

Ten sections: four GSE206306 and six GSE231630. Descriptive projection only; no plaque localization, disease-control test or Loop/TAL enrichment.

B4 Module scores by predicted broad compartment

Section-level descriptive summaries; transferred labels are broad context, not cell fractions or histological ROIs.
