

Supplementary Figure S2A | Spatial projection quality control

Ten complete sections: four GSE206306 and six GSE231630

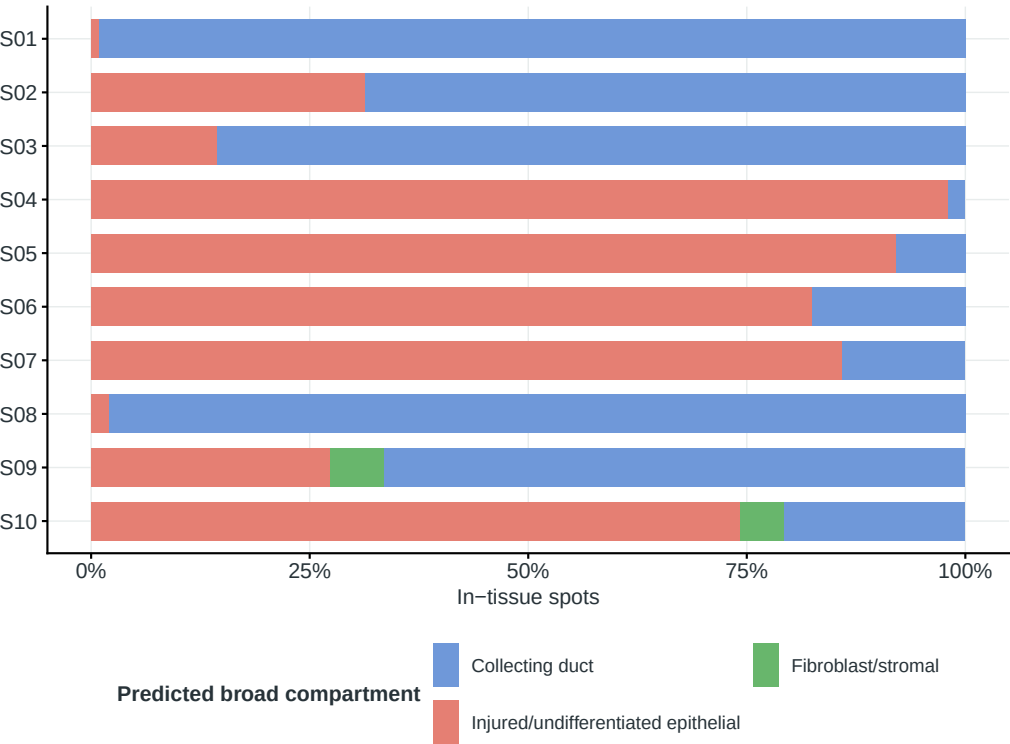

A spatial resource

B maximum label-transfer score

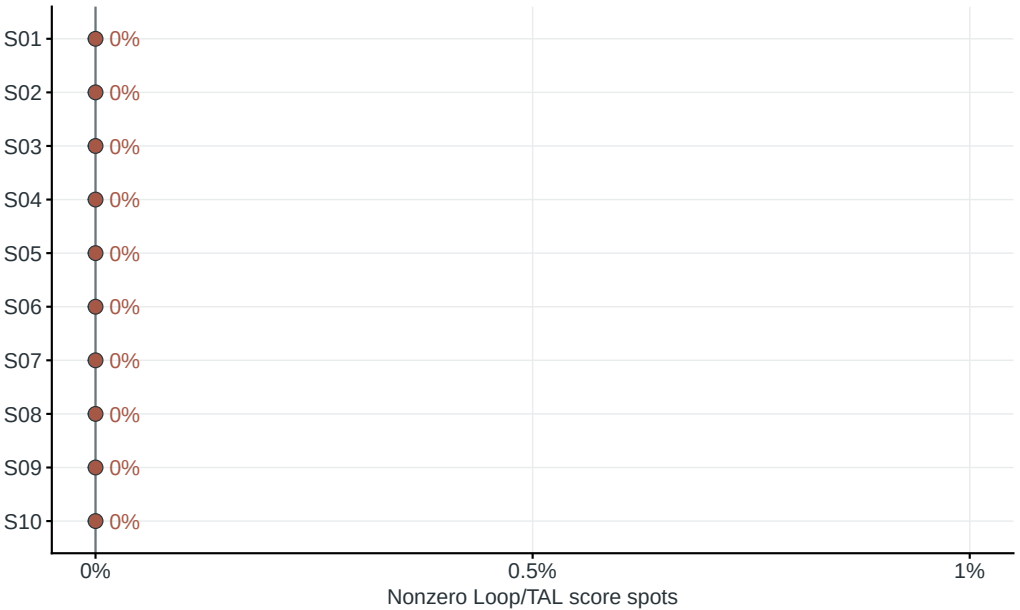

C max-predicted broad-compartment composition

D Loop/TAL projection usability

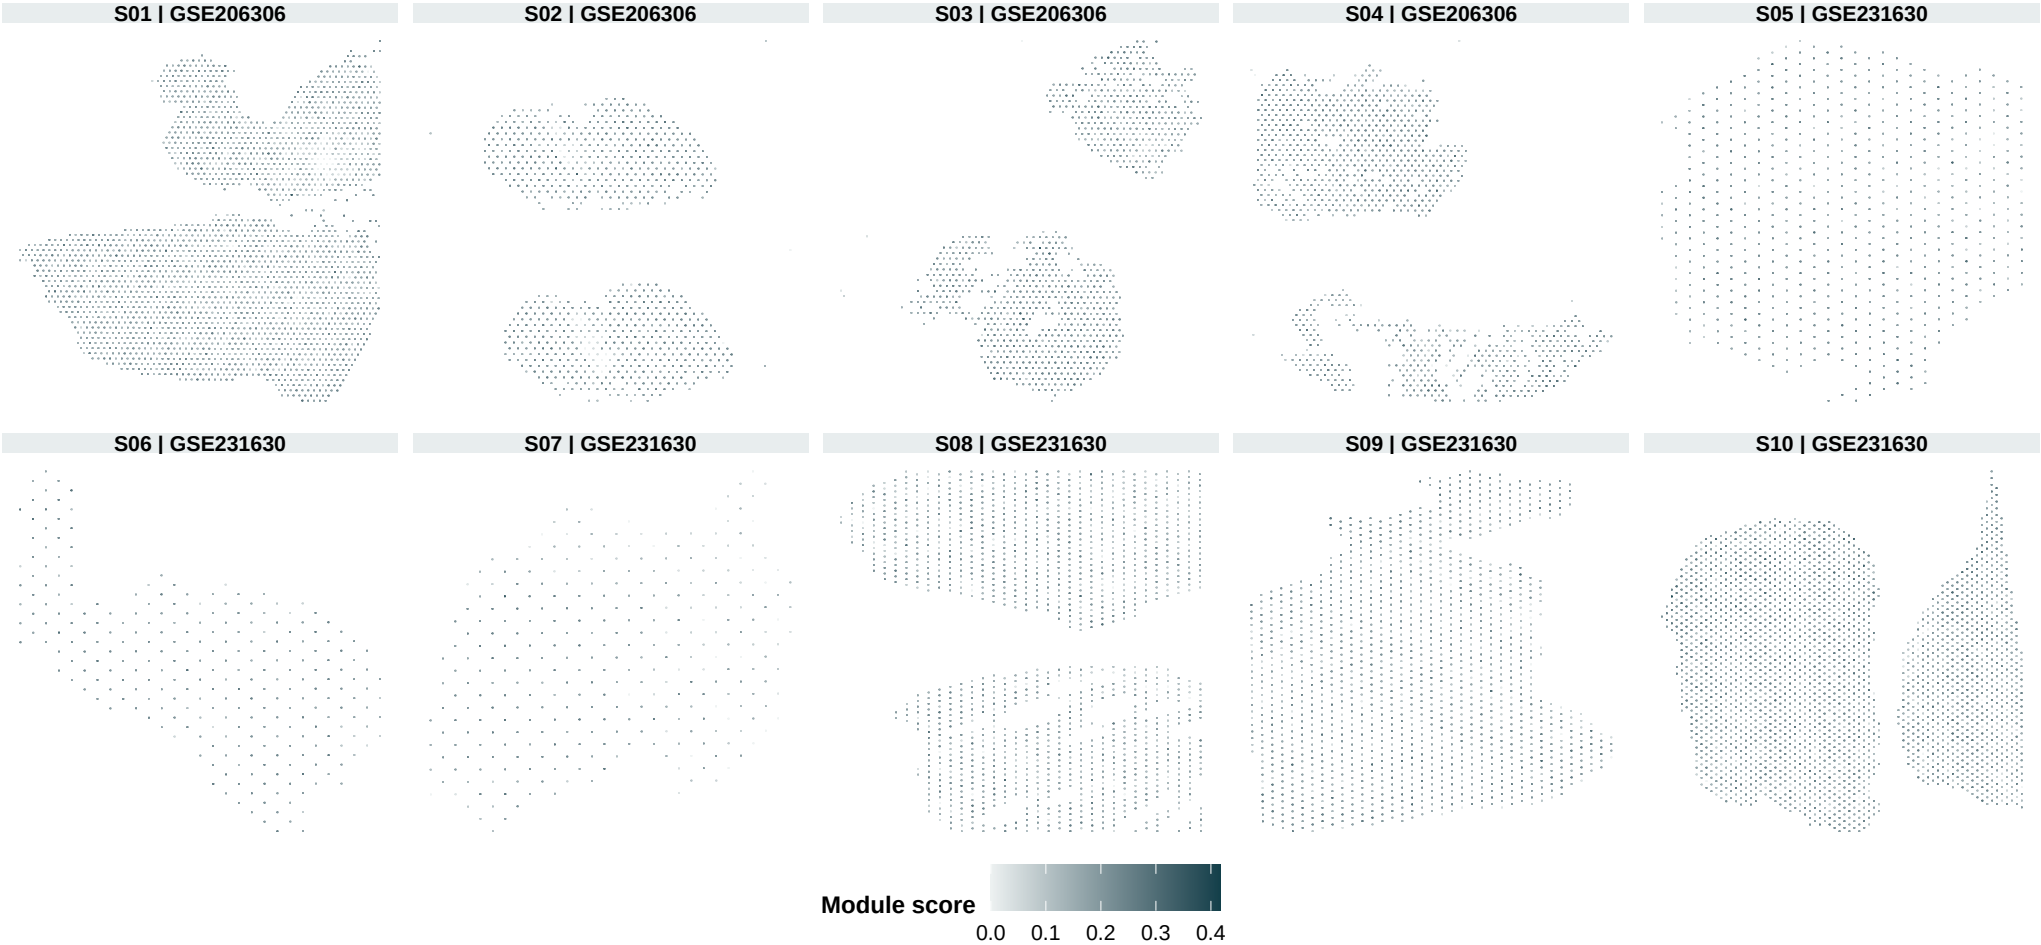

Nonzero prediction-score fraction was 0% in every section

Broad-compartment tissue-context projection only; no lesion ROI was available.

Supplementary Figure S2B1 | Bonferroni spatial module overlay

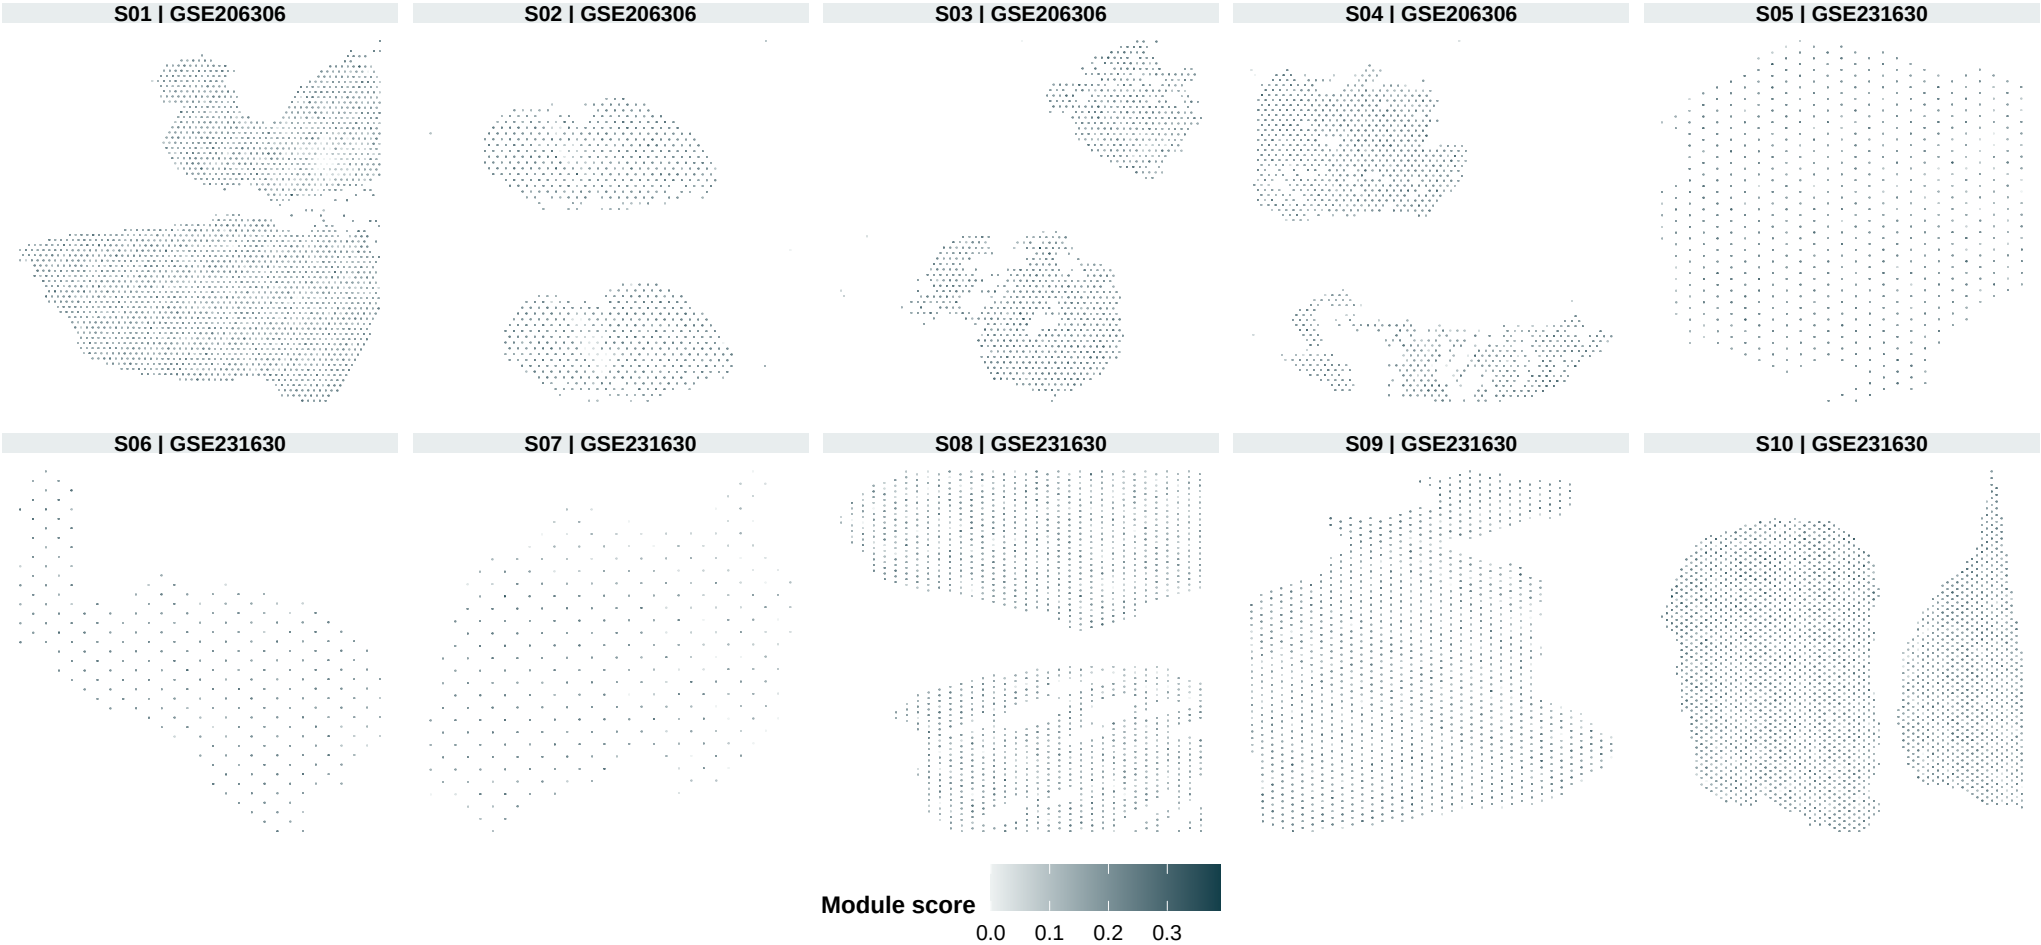

Ten sections: four GSE206306 and six GSE231630

Descriptive tissue-context projection; no plaque localization, disease-control test or Loop/TAL enrichment.

Supplementary Figure S2B2 | Top 100 spatial module overlay

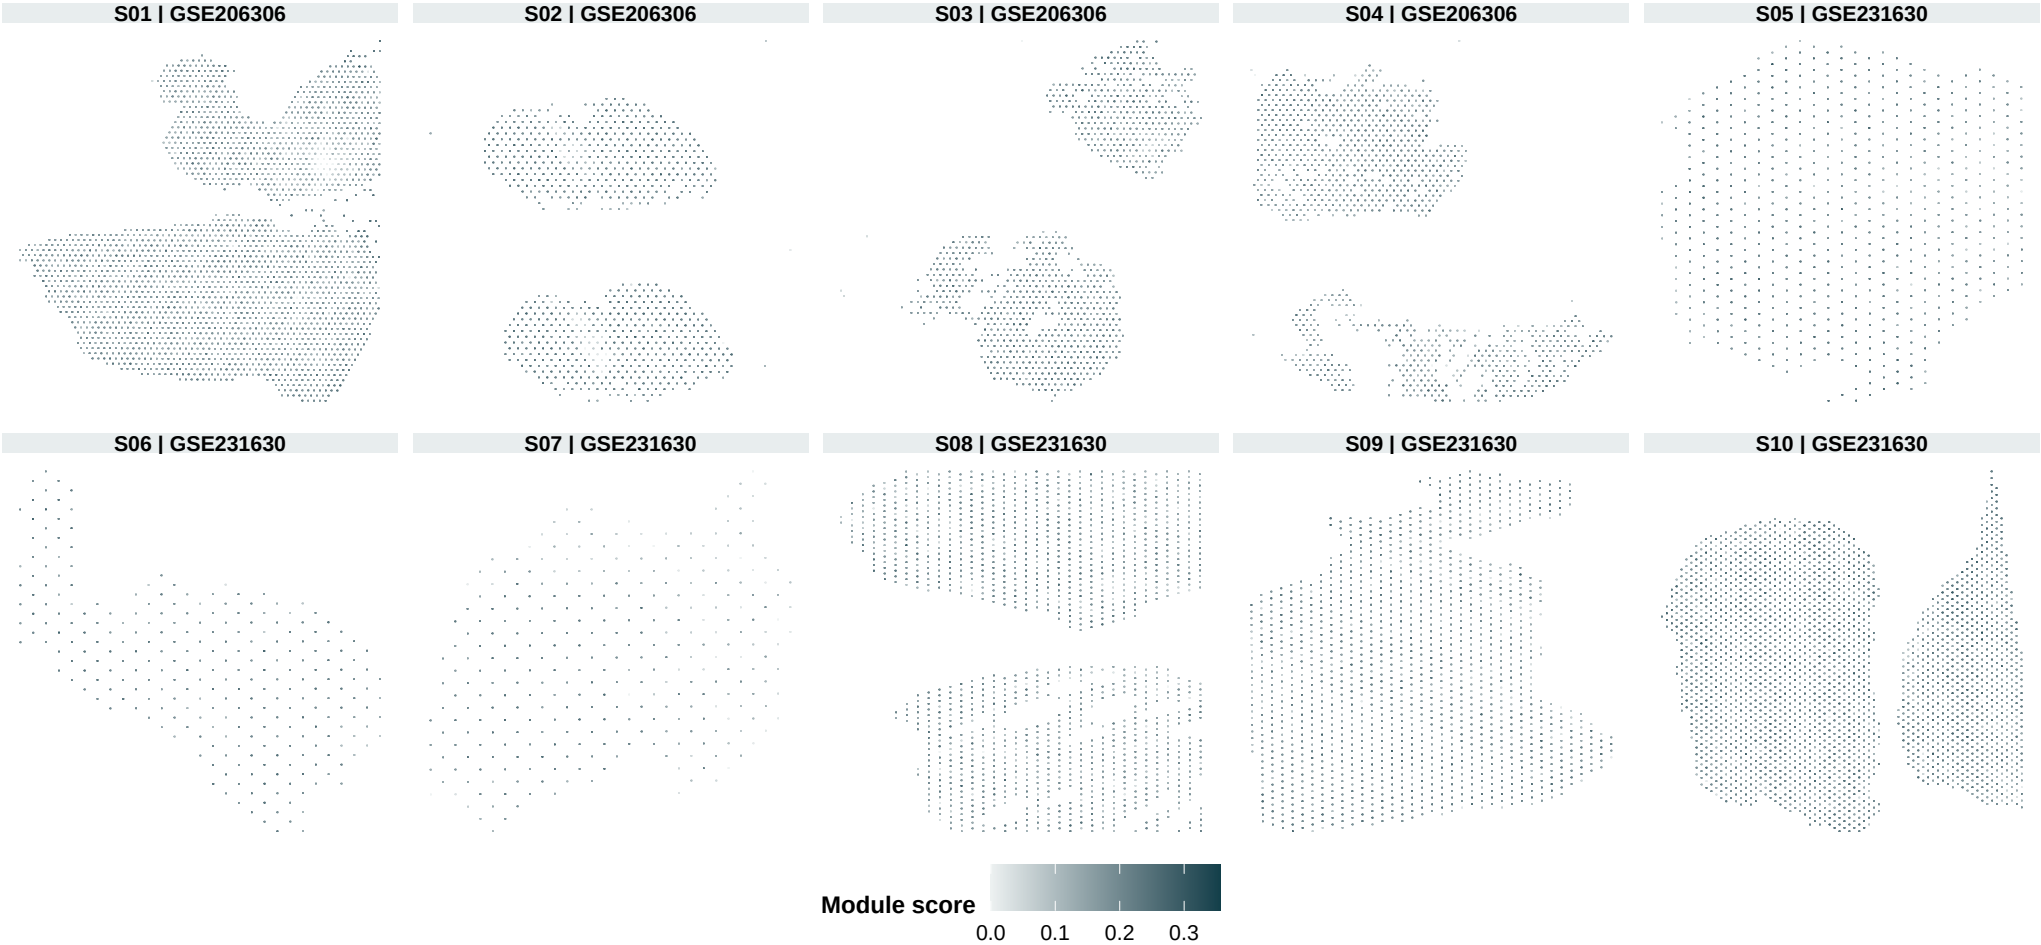

Ten sections: four GSE206306 and six GSE231630

Descriptive tissue-context projection; no plaque localization, disease-control test or Loop/TAL enrichment.

Supplementary Figure S2B3 | Suggestive spatial module overlay

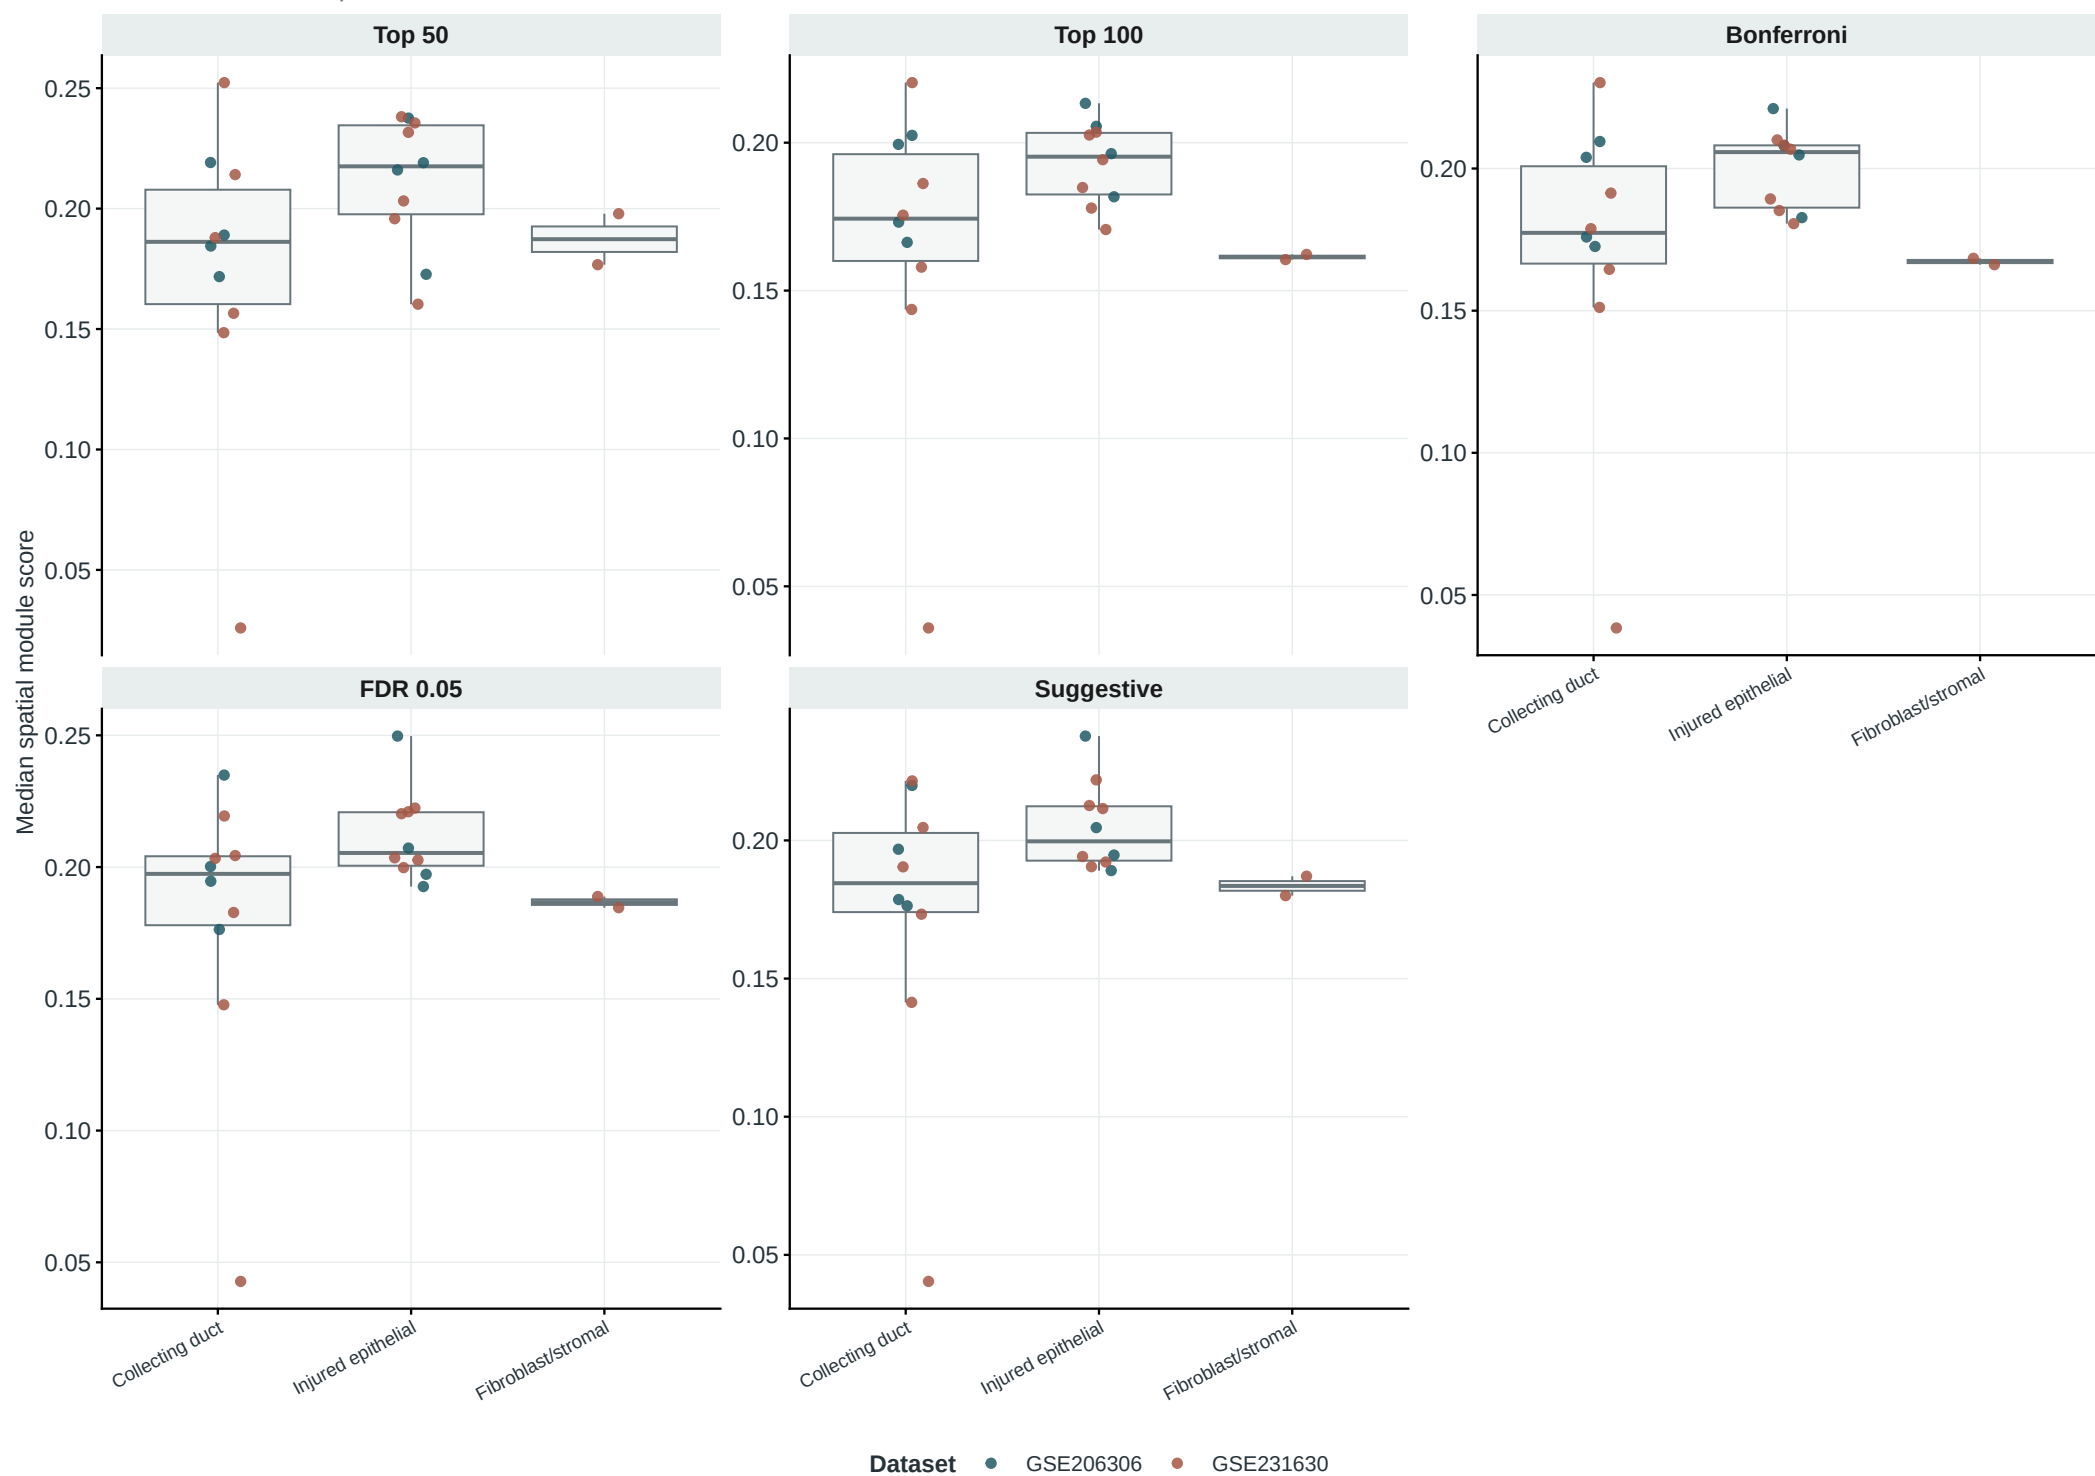

Ten sections: four GSE206306 and six GSE231630

Descriptive tissue-context projection; no plaque localization, disease-control test or Loop/TAL enrichment.

Supplementary Figure S2B4 | Module scores by predicted broad compartment

Section-level descriptive summaries

Transferred labels provide broad context only and are not cell fractions or histological ROIs.
